

### How do I use the downloaded file?

The file you have downloaded is a self extracting .ZIP file. After double clicking on this file, a window (see Fig.1) will open asking you where to extract the files to. Take note of where you extract these files to as the PVR Update is in here.

Once these files have been extracted, open the folder which you put them in and follow the rest of the instructions.

FIG.1.

### Upgrading the Firmware of Your Personal Video Recorder

**Note:** Upgrading the firmware of any device is a serious and potentially dangerous operation. We have put together this guide for customers who are unable to bring-in their unit to our stores to have the update done by one of our qualified staff. Please make sure you have carefully read, and fully understand the steps outlined below, before you attempt to apply the upgrade. Wintal International does not take any responsibility from damage that may occur to your PVR during the upgrade process. Before we begin the upgrade process, you will need the following:

A 9-PIN Male-Female RS-232 Serial Cable  
Available from most computer stores, and also  
available for online  
ordering at Radio Parts.

And the following files which are available from [www.wintal.com.au/downloads](http://www.wintal.com.au/downloads)

After you make sure you have connected the RS-232 cable properly to your PVR, your PVR is properly connected to your TV and have the PVR Update software on your hard drive, you can start the process of upgrading your PVR.

#### STEP 01

Turn on your PVR

#### STEP 02

Double-Click on either the file "PVR X10 Comm Port 1.bat" or "PVR X10 Comm Port 2.bat" depending on whether you have connected the RS232 Cable to Comm 1 or Comm 2 on your computer.

The program will pop up on your screen, complete the update and automatically close itself.

#### STEP 03

Enjoy your PVR

*Happy Viewing from the Wintal Team*
