

RFD2169IR RF MODULATOR WITH IR RETURN

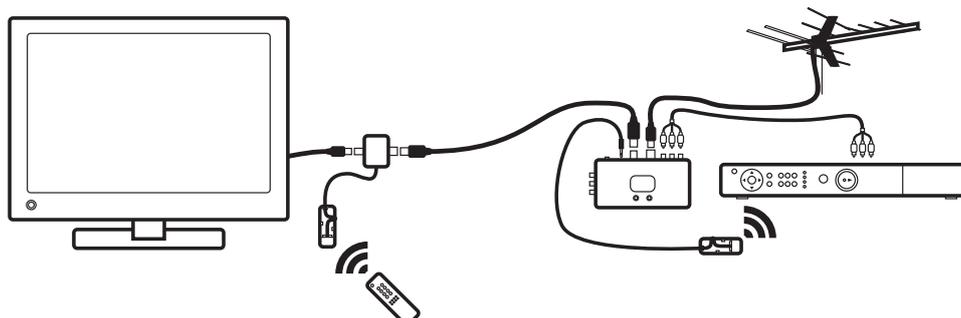

Distribute your AV equipment to multiple TVs through your home using RF Coaxial cable! Due to the digital switch-over, many analogue TV channels will be available to utilize, so you can insert your AV source through this modulator feed into your existing home RF distribution network.

With IR return function, you can even control your AV device without having to be in the same room or leaving cabinet doors open. The IR signal from your existing remote is modulated through the RF distribution network back to modulator where it is re-transmitted via the adjustable IR emitter.

Features

- RCA Input and Loop-out
- Channel Adjustment (Up/Down button)
 - ↳ LED Channel Number display
- PAL Antenna Input/Output
- IR Return—control your AV equipment with the original remote
