- External AC/DC adaptor
- Remote control
- Colour: White
- Unit size: L 220 x W 110 x H 120mm

Auxiliary input to connect your iPod and other media players!

Elegant and clean modern design

What is Digital Audio Broadcasting (DAB)?

Digital radio is a new, exciting and involving way for you to tune into your favourite radio stations. Traditionally radio programs were broadcast on different frequencies via FM and AM analogue signals. While AM/FM radio quality can suffer from interference caused by signals bouncing off walls, buildings, hills and other structures, it used up a comparatively large amount of spectrum for a relatively small number of stations, limiting your listening choices. DAB works by turning both sound and data into digital signals at transmission, and then decoding them at the other end using digital radio receivers. The result is close-to-CD-quality sound output and much more available programs.

- Clearer sound and improved reception
- Extra channels potentially doubles the number of commercial stations
- Tuning by station name, not frequency, making it easy to find favourite stations
